RENZO MINGAN

Backend Developer • Aspiring Full-Stack Developer
Malis, Guiguinto, Bulacan | +63 924 100 7308 | zrenzomingan@gmail.com | renzomingan.vercel.app | github.com/Yachiru10

PROFESSIONAL SUMMARY

Fourth-year BSIT student at Bulacan State University and backend developer, aspiring to grow into a full-stack role. Sole developer of ECOLINK, a deployed barangay reporting and e-services system with a Node.js, Express.js and MySQL backend, now live on Render. Also built the Firebase backend for a multi-vendor marketplace and the frontend for a national nonprofit. Looking for a backend or web development internship where I can keep building real systems.

TECHNICAL SKILLS

Backend: Node.js, Express.js, REST APIs, JWT, bcrypt, Server-Sent Events, Nodemailer
Frontend: HTML5, CSS3 (Flexbox, Grid, custom properties), Tailwind CSS, JavaScript (ES6+), responsive design, web accessibility (WCAG, ARIA), Leaflet
Databases & Cloud: MySQL, Aiven, Supabase (PostgreSQL, Storage), Render, Vercel, Cloud Firestore, Firebase Auth and Hosting, Google Cloud (Cloud Run, Cloud SQL, Cloud Storage), Docker
Languages: JavaScript, SQL
Tools: Git, GitHub

VOLUNTEER EXPERIENCE

Volunteer Frontend Developer • PKMKPI National Federation Portal Aug – Sep 2026
HTML5, CSS3, JavaScript, WCAG, ARIA • Volunteer team of 9 • pkmkpi.org

- Built an eight-page responsive website for the national federation of persons with disabilities in the Philippines, using semantic HTML5 and CSS with no framework
- Designed a shared page layout (announcement bar, sticky navigation, footer) used on every page. My build was one of five reference versions combined into the live portal
- Checked color pairs against WCAG AA/AAA contrast standards and used keyboard navigation, skip links and ARIA labels for users with disabilities
- Made a prototype accessibility panel in plain JavaScript with an Alt+A shortcut, text resizing, high contrast, a dyslexia-friendly mode and text-to-speech

SELECTED PROJECTS

ECOLINK • Barangay Community Issue Reporting & E-Services Platform 2026
Capstone Project • Sole Developer (4-member team)
Node.js, Express.js, MySQL (Aiven), JavaScript, HTML/CSS, Leaflet, Supabase Storage, Render • ecolink-unha.onrender.com

Mobile-friendly web system for Barangay Santo Cristo. Residents report community issues with a live photo and an exact map location, and request barangay documents online. Staff sort and resolve reports from one queue under deadlines. I designed, built and deployed the whole system and presented it with a live demo at the capstone defense.

- Built role-based access for five user roles (guest to superadmin) using JWT, bcrypt and server checks on every request
- Built a report workflow with set deadlines and a background job that runs every 5 minutes to escalate, auto-cancel and warn on late reports
- Added four layers against fake reports, which are SMS OTP with manual ID approval, camera-only photos with an EXIF date check, a barangay boundary geofence, and account blocking
- Added real-time admin notifications with Server-Sent Events and SMS status updates through the IPROG SMS API
- Built online requests for 6 barangay document types with reference numbers, status tracking and an audit log
- First deployed with Docker on Google Cloud Run. When the free trial ended, moved the system to free-tier hosting (Aiven MySQL, Supabase Storage, Render), updated the saved photo links, and set up regular database backups

Toy Haven • Online Toy & Collectibles Marketplace 2025
School Project • Backend Developer
Firebase (Cloud Firestore, Authentication, Hosting), JavaScript (ES Modules), HTML/CSS

- Designed the Cloud Firestore data model for a multi-vendor marketplace with three roles (buyer, seller, admin), covering users, shops, products, reviews and orders
- Wrote Firestore security rules for role-based access. Sellers can change only their own products, and users can see only their own carts, addresses and orders
- Built sign-up, login and account management with Firebase Auth, plus an admin panel that creates seller accounts and changes user roles
- Built the order workflow with stock checks at checkout, stock deductions and seller status updates (Processing → Shipped → Delivered / Cancelled)

- Cut the buyer homepage's data load by 96% (67.7 MB → 2.6 MB) by moving full-size images out of product records. Migrated all 135 existing products with no data loss

OTHER WORK EXPERIENCE

Pickup Rider • J&T Express, FBIC Tabe 2025 (2 months)
- Picked up parcels from customers on a daily schedule and route
- Checked and recorded each parcel before turning it over to the branch

Merchandiser • SureLeaf 2022 – 2024
- Trimmed and sorted vegetables and kept mall displays fresh and presentable

Helper • Mr. Freeze 2018 – 2019
- Delivered ice to different malls in Manila

EDUCATION

Bachelor of Science in Information Technology (BSIT) 2023 – March 2027 (expected)
Bulacan State University

Senior High School, TVL – ICT Strand 2020 – 2022
Guiguinto National Vocational High School

HONORS

President's Lister • Bulacan State University 2024 – 2025

Dean's Lister • Bulacan State University 2025 – 2026

LANGUAGES

Filipino, English
